

# Software – The gap between innovation and service Lessons Learned in GN3

Ann Harding
SWITCH/GN3 SA2
Innovation Workshop Oct 2011

## GN3 Multidomain Services & Software GÉANT

- **GN3 Multidomain Services** 
  - Connectivity and monitoring services
  - Wavelengths, Bandwidth on Demand, Monitoring
  - To be deployed in a federated context
  - To be globally interoperable
  - Innovative services are not always in a stable technical environment
- GN3 Tools AutoBAHN, I-SHARe, cNIS, AMPs, perfSONAR MDM
  - Inherited prototyped & deployments from GN<sub>2</sub>
    - 43 components for perfSONAR alone
  - Initially no explicit linking of tools development to service

## Development Challenges for Services GÉANT

**Service Definition Operational Model** 

Prototype Code Scalability Performance **UI** flexibility Ability to Respond

#### **Lessons to Learn?**

Prototype vs Production

Development process

Staffing and management

## The Perils of Prototypes in Production GÉANT

http://www.flickr.com/photos/leprecon/

#### **Case Study**

### Fighting the Culture of "Bad is Good Enough" – Steve Cotter, Esnet, TNC2011 – OSCARS 0.6

- Modular
- Production Quality
- Clearly defined APIs
- Rigourous Testing
- Observe how it is used
- Stick to schedule

# Development Process & Environment GÉANT

- Lots of buzzwords
  - AGILE
  - Waterfall
  - OpenUP
- Lots of ideology
  - "Open Source"
  - "Commercial"
- No magic bullet
  - No one system is designed for us

### Case study – GN2 + GN3

One lan vage to rule \*' all!

Minim e codevelr e code One rele se per

Split software governance from developers on the ground

AGILE(ish) development

On the ground developer management

### Staffing and Management Challenges

- Delivery is a rocky road
  - We have talented people
  - We have world class networks and services
  - Despite this we face problems delivering collaboratively
    - Defined quality
    - On time
    - "Boring" operational support
- Fragmentation makes life hard
  - Good developers get oversubscribed
    - Swapping between projects makes it hard to be consistent
    - Developers sometimes only 1 day a week!
  - The nearest/loudest/most pleasing manager wins
    - And each GN3 developer has min. 3 of them!

### A personal wishlist

- Dedicated developers & dev managers
  - Mindset
  - Time (at least 50%)
  - Expertise
  - Capable of doing turns at support
  - Working hand in hand with product management
- Flexibility of resourcing
  - Assigning developers 4 years into the future is bad
  - Especially when they are 'tied'
  - Compromises ability to respond to innovation

### Meet the challenge of federated software development

Service Definition Operational Model

Qualified, available
developers & dev
managers
AGILEish Methodology
Full Production Rewrites
Frequent Releases
Support a core duty
User Panels

Prototype Code
Scalability
Performance
UI flexibility
Ability to Respond
