Enormous amounts of language data exist

- The indexed Web contains about 40 billion pages (Oct 9, 2011; worldwidewebsize.com)
- 130 million books on Google Books (2010; 4% of all books)
- 13.6 billion words in Google Books published in 2008 alone
- The National Library of Norway digitizes 3000 to 4000 books every month (800 GB per day) in addition to collecting digital books, pictures, video etc.

Some things you can do with large language resources

- Map words, phrases, quotes, ideas on time/geo
- Develop statistical models of grammar, translation, etc.

- Preserve and disseminate cultural heritage
- etc.

Aske 'ash' compounds, Spring 2010

In Norwegian web newspapers

- 929 askeskyen
- 244 askesky
- 114 askefast
- 86 askeskvene

Wittgenstein archive: 1 of 40000 pages

Frinity College Cambridge: Cyford Lloiversity Press: Lloiversity of Ber

Allgemeinheit rechtfertigen wallen And in welach and auteres : in schen Berriele eures Rete durch & I diese Bessiele & dos feels was in is Riven externen betweetigt uns una withlight was this wellter. Aber won union wing bedeuken, das wir with der the sale duser Remielreite die Christin Therefst haben. (Seem die Derrichter. he Tuchtie teachach unvillestaden provendung der allermeine Form, 200. dem ein stilleren Alledruck dieser Form [des futzes].) Und weil die Wortsprache welin ni den Beweis erklast uklag was er berrich, that den Devet hur in ere audre Austruchstorm uterecht, so return wir hust uplances anch fans Alos weglassen. Klud wenn wit das take ad werden die mathaus maken beihals une viels blaver, wicht recordet durch der stellten Figen [wieles behententen] de Austracte du Wartmache. Wenn ier &. D. B unnittelbar heben A seke. due Deporchenteuft des writes alle UN The Dennikland Lukes the problem Barn Ven Filsher Chein eines Devenes on A durch B entoteber, worken dawn gaus most in my vieweit hie Degrebungen los B m Artetelen & we not capather. Florichen den der machennen tweesten De Helingen makes A+B, + mevert at wellen Then land so eist, unfeired von

Allgemeinheit rechtfertigen wollen tun wir vielmehr etwas anderes 7 <:> wir gehen Beispiele einer Reihe durch & diese Beispiele & das Gesetz was wir in ihnen erkennen befriedigt uns nun & wir sagen: ja, unser Beweis leistet wirklich was wir wollten. Aber wir müssen nun bedenken, daß wir mit der Angabe dieser Beispielreihe die Schreibweise B & C nur in eine andere <(> Schreibweise <)> übersetzt haben. (Denn die Beispielreihe ist nicht die Anwendung unvollständige Anwendung der allgemeinen Form, sondern ein anderer Ausdruck dieser Form [des Gesetzes] .) Und weil die Wortsprache wenn sie den Beweis erklärt, erklärt was er beweist, nur den Beweis nur in eine andere Ausdrucksform übersetzt, so können wir diese Erklärung auch ganz weglassen. Und wenn wir das tun so werden die mathematischen Verhältnisse viel < ... > klarer, nicht verwischt durch die vieldeutigen mehrdeutigen [vieles bedeutenden] Ausdrücke der Wortsprache. Wenn ich z.B. B unmittelbar neben A setze, ohne [d]D]azwischenkunft des Wortes "alle" [ohne Vermittlung durch d[as|en] Ausdruck der Wortsprache "für alle Zahlen Kardinalzahlen < etc. >"], so kann kein falscher Schein eines Beweises von A durch B entstehen. Wir sehen dann ganz nüchtern wie weit die Beziehungen von $B_{ZU} A \overset{\circ}{a} zu a + b = b + a_{reichen} & wo sie aufhören.$ [Wir sehen dann die nüchternen, <(> nackten <)> Beziehungen zwischen A & B, & wie weit sie re<i>chen.] Man lernt so erst, unbeirrt von

Many kinds of data \times many different perspectives

Who's managing the data?

A special data integration for a particular purpose

IBM DeepQA (Watson) combines knowledge from many language resources with a UIMA-based system, developed in 4 years by 25 people on a HPC cluster with 2500 compute cores

Language data resources are scattered

- Different formats, standards, licenses, access mechanisms
- Inconsistencies due to lack of versioning
- Largely unstructured, not easily combinable or comparable
- Insufficiently indexed, insufficient metadata and documentation

< □ > < 同 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

• Unmanaged, invisible, not curated

More problems handling language data resources

- Primary data are often unmanaged, messy, noisy, unstructured, inconsistent, ambiguous
- Annotation needed (open-ended, many-layered, task dependent, not always reusable)
- Many obsolete formats and decaying information bearers
- Good analysis tools are missing, unreliable or not easily adaptable
- Few language data collections have a permanent source of funding

< □ > < 同 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

 Many language data are protected by copyright and/or encumbered by privacy considerations

Some digital language research needs

- Cooperation between stakeholders to share high quality data and make them visible and accessible
- Mashups combining materials and annotations from different resources/locations
- Workflows with tools from different sources, tailoring to data formats and user needs
- Partly static data, partly changing (reparsing, new annotations etc.)
- Respect rights, licences and privacy (can be quite complex)
- Provenance information, persistency (also for mashups)
- High need for specific visualizations and text representations
- Preserve and curate data which is often irreplaceable

eHumanities needs

- Humanities lack tradition for technical support which natural sciences have
- Currently a low number of users, but high potential
- Moderate but growing CPU cycle needs, growing storage and service needs
- High need for simplifying sharing of distributed data through user and licence management
- Training of the large potential user community
- Collaboration tools to go beyond one-way knowledge access

< □ > < 同 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Data sharing as publication

CLARIN

Common Language Resources and Technologies Infrastructure

"CLARIN is committed to establish an integrated and interoperable research infrastructure of language resources and its technology. It aims at lifting the current fragmentation, offering a stable, persistent, accessible and extendable infrastructure and therefore enabling eHumanities."

- Pan-European ESFRI project, 24 countries (preparatory phase 2008–2011)
- ERIC legal entity applied for; national commitments under way

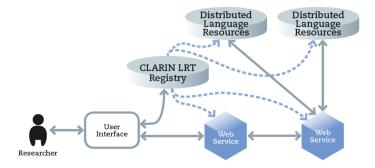

Usage scenario

- A researcher authenticates at her own organization and creates a "virtual" collection of resources from different repositories
- She does this on the basis of browsing a catalogue, searching through metadata, or searching in resource content
- To be granted access to this distributed dataset she signs the appropriate licenses
- She is then able to use a workflow specification tool and process this virtual collection using LT tools in the form of reliable distributed web services which he is authorized to use.
- Intermediate results are stored in a user specific workspace
- After evaluation, the resulting data (including metadata) can be added to a repository and the "virtual" collection specification can be stored for future reference using PIDs.

eInfrastructure components

- Trusted repositories for data and services e.g. CLARIN centers
- Metadata catalog for browsing and searching
- Virtual collection registries to store user specified collections and share them
- AAI infrastructure for technical, organizational, legal issues
- Distributed workspaces
- Persistent identification of resources to make references last

Web services

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

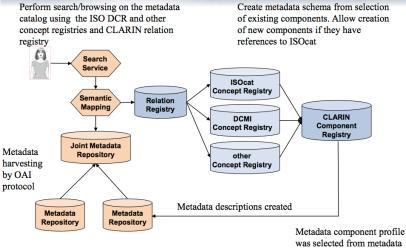

Joint metadata domain

- Currently a fragmented metadata landscape: DC, OLAC, IMDI, TEI Header, etc.
- Wrong terminology, too many or too few descriptors, limited interoperability, ...

CLARIN chose to develop CMDI (Component MetaData Infrastructure) and adhere to TC37/ISOcat

- Based on explicit syntax and semantics
- Not so much a single new metadata set or schema but rather a metadata infrastructure supporting several schemas
- Allow researchers to create a new schema and choose and define their own metadata descriptors
- Support for existing sets as IMDI, DC/OLAC

Metadata lifecycle

component registry

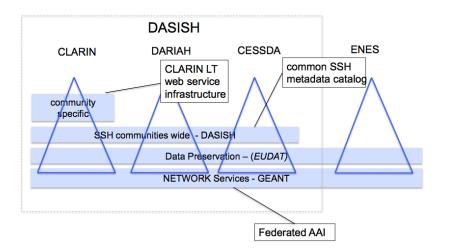

▲ロ▶ ▲冊▶ ▲ヨ▶ ▲ヨ▶ ヨー の々で

CLARIN layers

- 1. Coordination and governance layer (ERIC)
- 2. Infrastructure layer (long-term national responsibility)
- 3. Content creation layer (short-term projects by countries, institutions)

▲ロ▶ ▲冊▶ ▲ヨ▶ ▲ヨ▶ ヨー の々で

DASISH

▲□▶ ▲圖▶ ▲臣▶ ▲臣▶ ―臣 …のへで

Some benefits of language curation and modeling

- Preservation of threatened language species
- Preservation of data on decaying bearers
- Management and much wider access to data
- Translation and cross-language information access
- Better interfaces, also inclusion of language impaired
- Deeper understanding of ideas, attitudes etc. in society/in history

elnfrastructure issues in distributed language data resources

How do community-specific and generic infrastructure layers work together?

How do we move from project-based infrastructure actions to very long term data archiving?

How do eLibraries, archives and national data services fit in the picture?

How will organizations such as EGI, PRACE and GEANT fit in offering grid, cloud, HPC and AAI services?

Acknowledgements

Thanks to Daan Broeder (MPI / CLARIN), NGT, WALS, the WAB and TREPIL projects for slide materials
