

Baltic Ring – Cost sharing

Jari Miettinen, project manager November 25th 2011

Motto

A quarrel is quickly settled when deserted by one party; there is no battle unless there be two.

Seneca, 4 BC- 65 AD

Content

- Goal setting
- Basic principles
- The cases
- Long-term scenarios
- Financing the cost
- Feasible next steps

Goal setting 1

Complexity is inherited into subsequent systems

Goal setting 2

Goal setting 3

Baltic Ring Project Goal 7
(G7): Operations cost
analysis and suggestions
for a cost sharing model

Basic principles

- Cost pricing: no additional costs
- Cost coverage: cause pays
- Agreeing on the costs: NRENs at the endpoints are at the special position

combined cost optimization

Schematic structure of the cost

Financial co-operation

Financing the cost

Item	Coverage Method	Expected Cost Level	Remark
I n i t i a l development	Consortium m e m b e r s , grants	Medium	Man months dominate
Fibre paths and supporting hardware		Medium	Availability has strong influence on financing need
DWDM equipment and supporting software		Medium	Co-tendering may introduce savings
Internal light paths	Projects and parties using service	Low	Users benefit
Collaboration bodies	Consortium members	Low	Defined by scoping
O p e r a t i o n s financing	Consortium members	Low	Defined by scoping

Cases 1: Blue and green

Blue arrow case: nearest neighbour Green arrow case: "man-in-the-middle"

Cases 2: situations investigated

- Two research groups separated by NRENs
 - ✓ Straight-forward to calculate if number of NRENs is ≤3
 - Formulas given
- Financing cross-border fibers
 - Four (4) different situations identified
 - Barter trading and swaps in the Ring are effective
 - Case sensitive problem

Flexible approach 1

- Case-by-case independent fair financing ("whom it concerns model")
- Coordinated delayed billing based on actual costs ("centralized billing model")
- 3. Cost sharing based on nonusage related criteria ("agreement model")

Flexible approach 2 – pick one!

- Case-by-case independent fair financing ("whom it concerns model")
- Coordinated delayed billing based on actual costs ("centralized billing model")
- 3. Cost sharing based on nonusage related criteria ("agreement model")

Flexible approach 3 – Why?

Aspect	Early Stage	Late Stage	Remark
Level of Commitment	Medium	High	Importance is increasing.
Administrative Investment	Low	Low	Shared and well-delegated administration.
Service Portfolio Complexity	Low	Low	Simple solutions are sought.
Speed of Progress	High	Medium	The services are wanted in use rather quickly.
Use Control	Low	Low	Each NREN is responsible for their respective users.

Administrative targets: D3 page 14

Tariffs and contributions

- The consortium partners should exchange tariff information
- Contributions from third parties should be canalized via partners

Long-term use scenarios

Scenario 1: balanced use

Scenario 2: simple unbalanced case

Long-term use scenarios

Feasible next steps

- Question the principles?
- What is the level of financing coordination wanted?
- Which alternative to choose from the flexible approaches?
- Searching funding instruments or methods

Questions and comments, please!
