

40G newsletter

NORDUnet 40G newsletter

NORDUnet will today, September 16'th, announce that it's 40 Gbit/s core network is in operation.

This will be released as a joint message from NORDUnet, Alcatel-Lucent, IPNETT and Juniper Networks.

NORDUnet brings 40 Gbit backbone in to operation

Copenhagen, Denmark - September 16th 2009

Alcatel-Lucent and IPNETT has completed the 40 Gbit/s upgrade of the first link of NORDUnet's optical and IP transport network, which provides the Nordic infrastructure for research and education. Preparing the move to 100 Gbit/s, this network upgrade will further support new application enablement for universities and scientists in the Nordics and strengthen international collaborative environment. The new 40 Gbit/s per channel technology utilises the existing network capabilities that allow for up to 96 parallel channels on a single fiber pair.
